

STABLE NON-DIHYDRATE AZITHROMYCIN ORAL SUSPENSIONS

## ABSTRACT

5        This invention relates to a powder for oral  
suspension, and an oral suspension made therefrom, which  
comprises a n-propanol solvate of non-dihydrate  
azithromycin and an azithromycin conversion stabilizing  
excipient, wherein said excipient reduces the conversion  
10 of the form of azithromycin, when placed in suspension,  
to another form of azithromycin.

      This invention also relates to an oral suspension  
which comprises a n-propanol solvate of non-dihydrate  
azithromycin and an aqueous vehicle.
